

Wetrok Leinol BW | NW
Modern wooden floor care
with an eco-friendly formula

Wetrok Leinol BW | NW: value-preserving wood care oil based on a new eco-friendly formula

People are spending more and more time indoors. This gives rise to higher requirements for the cleaning and care products used: they must be highly effective and eco-friendly, too. A wood care oil that fulfils both requirements had been hard to find until now.

Benefits

Easier to use

The new formula makes Leinol BW/NW easier to apply than ever before for cleaning personnel. Leinol is more fluid than highly viscous oils and can therefore be distributed more evenly and absorbed more quickly.

Unbeatable protection

Laboratory tests confirm that the protective effect of the new formula is not only more durable and long-lasting, but also takes effect more quickly. The water and dirt-repellent protective coating therefore provides for wood floors that look natural for many years.

New eco-friendly formula

Modern wood floor oil must not cause hazardous emissions for workers or room occupants. That's why our new eco-friendly formula is completely free of volatile solvents and other substances that pose a health risk.

In line with sustainable construction standards

The EMICODE EC1 Plus label certifies that the new Leinol BW/NW meets all requirements for sustainable construction. Architects, flooring experts and contract cleaners can therefore rely on Leinol BW/NW for eco-friendly new builds.

Cleaning and care in a single step

Leinol NW is more than just an aftercare oil. When diluted to a mixing ratio of 10%, Leinol NW can be mopped onto the floor as a protective care product with a strong cleaning effect. There is no need for additional care products or wood soaps.

3 wood floor maintenance tips:

1) Re-oil your floors on a regular basis

Basic care in the form of a single application of Leinol BW is the first step for sustainable wood protection. Make sure to re-oil your floor regularly using Leinol NW, especially at the start (about 2 to 4 times in the first year).

2) Leinol can also be used for wipe and care

When diluted to a mixing ratio of 10%, Leinol NW can be used as a wipe and care product for protection and cleaning (supplementary care products or wood soaps are completely redundant).

3) Use dust cloths for maintenance cleaning

For daily removal of loose dirt, we recommend dust-binding mopping. Your advantages: the highest germ reduction, optimal cleaning results, no airborne dust.

By the way: Masslinn dust cloths are certified with the Cradle to Cradle eco-label (bronze).

Wetrok has completely revised the formula of its Leinol BW (basic care) and Leinol NW (aftercare) wood care oils. The result: improved protection with an ecological touch. Leinol BW/NW have been awarded the strictest VOC eco-label for wood care products: EMICODE EC1 Plus.

EMICODE label: the most rigorous criteria for low-emission products

The GEV EMICODE environmental label is used to mark eco-friendly, low-emission products for sustainable construction. EMICODE sets the most demanding emission limits on the market with the EC1 Plus premium class – Wetrok Leinol BW/NW meet these limits 100% and have therefore been awarded the EMICODE EC1 Plus label.

EMICODE EC1 Plus certified products are:

- Low in emissions
- Safe to use
- Value-preserving
- Tested by an independent institute
- Compatible with green building standards

Customer opinion

The new eco-friendly formula does not fail to impress

«I have been a fan of Leinol wood care oil since the first time I used it. It has noticeably improved the look of our parquet floors and, thanks to the eco-label, it also fulfils our environmental product sourcing requirements. A high-quality product at a fair price. What more could you want?»

Pascal Knobel,
qualified caretaker at Eniwa AG

Wetrok Leinol BW | NW: two care products for naturally protected wood floors

Wetrok Leinol BW (basic care)

Wetrok Leinol NW (aftercare)

Application:	Initial application on untreated floors	Aftercare on oiled floors/mop and care
