Information about the flooring

Wetrok AG cannot accept any liability for damages due to improper use.
For security information, see the safety data sheet at www.wetrok.com.
Wear the required personal protective equipment (PPE): e.g. protective gloves, safety goggles, work shoes.
Follow the information and remarks on the label, product data sheet and material safety data sheet.
The product data sheet describes the product and gives information about its application, storage. See www.wetrok.com.
The recommended colours of pad and brushes consist to the actual wWetrok product range.
Follow the special cleaning and care instructions of the floor manufacturer.
The cleaning and care instructions are recommendations and suggestions and apply to floorings in object quality.

Do not coat structured floor coverings.

Soft stone, e.g. marble, limestone (Jura-limestone, concha-limestone), Solnhofen stone, travertine, slate or sandstone is sensitive to acid.

Soft stone is sensitive to scratches, only use suitable pads and brushes.

Plastic-bonded synthetic stone is sensitive to solvents.

Most grouts are acid sensitive. Soak the joints well before using acidic cleaners.

There must be no coating in the open air and in wet rooms. Danger of slipping!

Cement consists of limestone, clay, sand and aggregates.

Synthetic stone is a blend of coloured stone chippings in cement or bound with a resin.

Natural stone is a 100% natural product consisting of minerals such as quartz, feldspar, calcite, selenite, hornblende or mica.

The colour and the appearance of the stone varies depending on its origin.

Cast stone is laid as plates and terrazzo is poured and ground across the entire surface.

Distinguishing feature: cement-bound synthetic stone acid assay: apply a little basic sanitary cleaner to the magnesite covering. Foams up: material damage!

Remove loose dirt before every cleaning, damp mop smooth floors and vacuum structured floors.

Cleaning agents and surface treatments may alter the appearance and properties of a floor's surface.

Test on an inconspicuous spot to find which product is suitable for your requirements.

Test beforehand on an inconspicuous spot to see if the cleaning agent or surface treatment damages the floor.

Dirt-trapping zones, incl. dirt-trapping mats (Wetrok Gardamat) in the entrance, at least 7m long, greatly reduce the amount of dirt tracked into the building.

If you have any questions, please don't hesitate to contact us.
