Information about the flooring

Wetrok AG cannot accept any liability for damages due to improper use.
For security information, see the safety data sheet at www.wetrok.com.
Wear the required personal protective equipment (PPE): e.g. protective gloves, safety goggles, work shoes.
Follow the information and remarks on the label, product data sheet and material safety data sheet.
The product data sheet describes the product and gives information about its application, storage. See www.wetrok.com.
The recommended colours of pad and brushes consist to the actual wWetrok product range.
Follow the special cleaning and care instructions of the floor manufacturer.
The cleaning and care instructions are recommendations and suggestions and apply to floorings in object quality.

Polyofine floor coverings are scratch-sensitive floor coverings. Do not use abrasive pads or brushes. Polyofine floor coverings are sensitive to certain solvents, such as ketone, ester and chlorinated hydrocarbon. Fat-soluble colorants such as shoe polish or asphalt can penetrate into polyofine floor coverings: diffusion. Polyofine floor coverings are sensitive to cigarette burns, glowing cigarettes and deposit marks. Polyofine floor coverings are very resistant to strong alkalines and acids.

Polyofine is an elastic, synthetic, chlorine-free covering made from polyethylene and polypropylene, fillers and colour pigments. Polyofine has good electrical insulation properties and often strong electrostatic charges. Homogeneous polyofine floor coverings consist of one or more layers with the same composition. Heterogeneous polyofine floor coverings consist of several layers with the same basic materials but with a different composition.

Distinguishing feature: fire assay with a glowing hot needle in an inconspicuous place: no acrid smell, crater cannot be removed with the fingers.

Remove loose dirt before every cleaning, damp mop smooth floors and vacuum structured floors. Cleaning agents and surface treatments may alter the appearance and properties of a floor's surface. Test on an inconspicuous spot to find which product is suitable for your requirements. Test beforehand on an inconspicuous spot to see if the cleaning agent or surface treatment damages the floor. Dirt-trapping zones, incl. dirt-trapping mats (Wetrok Gardamat) in the entrance, at least 7m long, greatly reduce the amount of dirt tracked into the building.

If you have any questions, please don't hesitate to contact us. For training courses, contact the Wetrok Academy, tel. +41 (0)43 255 51 43 or academy@wetrok.ch.
