* basic treatment / structure: B: coated / C: waxed / D: oiled / E: sealed / F: untreated / G: maintenance care product / H: Disinfection / P: polishing / S: structured / V: heavily soiled

important: before protective treatment: the floor must be perfectly stripped, thoroughly rinsed and completely dry!
 When spray cleaning, you should change your pad often.
 Let dry protection treatment completely between the layers and before use.
 Process treatment of protection: see descriptions of method.
 For initial cleaning with maintenance cleaner after protective treatment, see "initial cleaning".

General instructions for cleaning and care

Information about the flooring

Wetrok AG cannot accept any liability for damages due to improper use.
For security information, see the safety data sheet at www.wetrok.com.
Wear the required personal protective equipment (PPE): e.g. protective gloves, safety goggles, work shoes.
Follow the information and remarks on the label, product data sheet and material safety data sheet.
The product data sheet describes the product and gives information about its application, storage. See www.wetrok.com.
The recommended colours of pad and brushes consist to the actual wWetrok product range.
Follow the special cleaning and care instructions of the floor manufacturer.
The cleaning and care instructions are recommendations and suggestions and apply to floorings in object quality.

Strong alkalines can destroy or discolour wood coverings. Use a special basic linoleum cleaner!
Wood coverings are sensitive to abrasive pads and brushes.
Factory sealed parquet is water sensitive. Water can penetrate into the wood covering through the joints.
Permanent exposure to moisture should be avoided with wood coverings. Mop as little as possible and wring out the mop thoroughly.
Allow it to dry completely before applying a protective treatment! Allow longer drying times than for non-porous coverings such as PVC.

Hardwoods (deciduous wood) such as oak, beech, ash, maple, walnut and acacia, or exotic woods, are processed into parquet.
Softwoods (coniferous wood) such as spruce, fir and pine are mostly used in the manufacturing of floor boards (long tongue-and-groove boards).
Certain manufacturers seal the wood coverings at the factory.
Humidity variations cause wood to shrink (dry out) or swell (exposure to moisture) and, possibly, warp (moisture).
Distinguishing feature: appearance of wood, dull sound when tapped.

Remove loose dirt before every cleaning, damp mop smooth floors and vacuum structured floors.
Cleaning agents and surface treatments may alter the appearance and properties of a floor's surface.
Test on an inconspicuous spot to find which product is suitable for your requirements.
Test beforehand on an inconspicuous spot to see if the cleaning agent or surface treatment damages the floor.
Dirt-trapping zones, incl. dirt-trapping mats (Wetrok Gardamat) in the entrance, at least 7m long, greatly reduce the amount of dirt tracked into the building.

If you have any questions, please don't hesitate to contact us.
